

BEGINNER WEBSITES

CoderDojo Silicon Valley | March 2, 2014

BASIC PAGE SETUP

```
<!DOCTYPE html>
<html>
<head>
<title>Choose your own site title, and type it in here.</title>
</head>
<body>
Everything that appears on your site will be entered here (text, images etc.), between the body tags.
</body>
</html>
```

TEXT FORMATTING

```
<h1> Largest Header Size </h1> (Try h2, h3, h4...)
<div> Division (or section) of page content </div>
<p> Paragraphs </p>
<br /> Line Break
```

LISTS

Unordered Lists

```
<ul>
    <li> List Item </li>
    <li> List Item </li>
</ul>
```

Ordered Lists

```
<ol>
    <li> List Item </li>
    <li> List Item </li>
</ol>
```

IMAGES

```

```

LINKS

```
<a href="page-name.html"> Link text goes here </a>
```

CSS

A CSS Rule = Selector + Declarations

Every declaration has 2 parts:

property: value;

```
body {
    font-family: Arial;
    background-color: #eee;
    color: green;
}
```

Challenges

- How would you make an image into a link?
- How would you link to an external site? (For example, make a link to Google!)
- How would you make a link to an image so that the user can click on the image and open up the larger image in a new window?
- What if you had a lot of pictures and wanted to organize them in different folders under the "images" folder? How would you put that image path into your code to display the image?
- Make a list that looks like this:
 - 1. Favorite Books**
 - The Phantom Tollbooth
 - Where the Red Fern Grows
 - Old Yeller
 - 2. Favorite Colors**
 - Purple
 - Red
 - Blue
